# WESTERN AMERICAN ALPINES

By IRA N. GABRIELSON

Here is a book recommended, not only for the botanist or expert, but written in understandable language that makes it intensely interesting for the collector, the student and even the tourist. WESTERN AMERICAN ALPINES is a volume of 270 pages, 125 beautiful pictures of western wild flowers and describes some 500 species of rare plants.

**\$3.50 Postpaid**

The author's knowledge of wild plant life, gained through years of experimenting with wild flowers as garden subjects, enables him to give valuable cultural instruction.

As a guide for identification of the mountain top flora it will be greatly appreciated and as a reference book, nothing yet published equals this new volume.

## WHAT WE GROW

We are growers on a large scale of hardy perennial, alpine and rock plants, especially those native to the Pacific Northwest. Many of the world's most beautiful rock plants are found in the mountains and deserts of Oregon. We have been collecting and growing native plants for several years and at present have some 800 species growing on our grounds. Some of these natives are now being offered for sale for the first time. Some are robust, strong growers. Others, of most dainty, slow growth, require time to reach their true beauty. Many are worth any effort required to get them established.

## HARDINESS

Plants are field grown from seedling stage and practically all should be hardy in any part of the United States. Nearly all the Oregon plants offered for sale are from high altitudes and desert areas where they are exposed to as great extremes of weather and temperature as will be experienced anywhere in eastern United States. Any plant of doubtful hardiness will be so marked.

## SHIPPING

Shipments will be made to all points west of the Rockies post paid. Customers wishing delivery east of the Rocky Mountains will please add 10 per cent of the order to help defray the extra cost of packing and postage. Plants that require to be mudded or balled will be sent express collect, unless otherwise requested.

## SHIPPING SEASON

Many alpine plants that are regarded as fussy have secured their reputation because of being moved at the wrong time. Most of our native plants have definite dormant seasons during which they may be moved with little trouble, while movement at another season often proves fatal. Therefore, we will take the liberty of withholding shipment of such plants until the proper time unless the purchaser specifically requests otherwise. Notice will be sent advising of approximate shipping date of such back order. As our stock of many of these plants is limited we suggest that orders be placed early.

## GUARANTEE

We will guarantee plants grown from cuttings and divisions to be true to name and color. Our seed is purchased from the most reliable sources but we can not guarantee seedlings. Our responsibility ceases when plants are delivered in good condition to the transportation companies and receipt is obtained for same.

## PRICES

A dozen plants of the same kind will be sold at ten times the single plant price, three plants at the dozen rate, and 100 plants at seven times the dozen price. For example, plants priced at 25c each will be \$2.50 per dozen or \$17.50 per hundred. Special prices on larger lots. Order by number if you wish.

## Rock Gardening

**T**HE newest and, in many ways, the most delightful form of gardening is in building and maintaining rock gardens. Our business is the propagation of perennial plants and bulbs suitable for such gardens. We hope this little catalogue will fall into the hands of many persons who are just becoming interested, and we are, therefore, giving a few pointers on the proper building of rock gardens.

Contrary to the belief of many, building a rock garden is neither mysterious nor difficult. A rock garden is primarily a place in which to grow and display the dazzling color and compact habits of the alpine and rock plants. If a stone mason be employed for the work a display of masonry or rock with a few poor places for plants usually results.

It is possible to spend endless amounts of money on rockeries and many people in this country feel it to be a rich man's game. As a matter of fact, because of their dwarf growth, a surprisingly large number of rock plants can be grown in a small space. This makes it possible to work out color combinations and seasonal displays in a small space.

No matter if your rock garden be small or large, build it right. Do not put up a pile of rock and throw dirt over it. First be sure of drainage. Dig down, put in a layer of small rock and gravel, and with this as a foundation begin to build the rockery. If possible, choose rough irregular stones well weathered so that no newly broken surfaces will show. Place the rock so that it will be in a natural position, always with the largest surface down and sloped so the water will reach the roots of the plants to be planted later about them. Build from the bottom, packing the earth, which can be ordinary garden soil mixed with one-fourth sand and an equal amount of leaf mould, firmly about the rocks and in the crevices to accommodate the different types of plants. If possible, allow it to settle some time before planting. Some rocks should be completely buried as many alpine plants delight in wrapping their roots about them to secure coolness and moisture.

Therefore, keep these points in mind when building a rock garden:

Rock should be half to two-thirds buried in the ground, always with the largest surface down.

Place the rock tilted back so water will penetrate to the roots of the plants.

A bank or natural slope is an advantage as it saves labor.

Provide a place for shade plants and a boggy place if bog plants are desired.

Most alpine plants delight in full sun if rocks and some moisture are present to provide coolness for the roots.

Porous and absorbent rock is best and it should all be of the same kind. Alpine plants need a good depth of soil.

If the soil is heavy provide drainage by using gravel or broken rock under the soil and mix some sand and gravel with the soil. Leaf mould will also be an advantage.

Earth should be packed firmly in crevices and about the rocks.

### Don'ts to Be Observed in Building a Rock Garden

Don't place rocks so upper overhang the lower ones.

Don't build a garden of rocks, but a garden for alpine flowers.

Don't use more than one kind of rock in construction.

Don't build under the drip of trees or close to a building.

Don't make the soil rich with manure; it makes the plants straggly.

Don't use smooth hard surface rocks.

Don't use too many or too small rocks.

Don't display, but conceal any mason work if possible.

### Planting Suggestions

Young thrifty plants quickly shape themselves to the contour of the rocks and look as if they belong there.

The best effects can be secured by keeping a balance between the various types of ground covers, dwarf shrubs, evergreen and deciduous

perennials and dainty bulb flowers. Some of each will distribute the blooming period through the season.

For ground covers and carpeters the creeping Thymes take first rank, with *Sagina* a close second. In our opinion, many of the *Sedums* are valuable for ground covers. Such dainty flowering bulbs as *Scillas*, *Galanthus*, Grape hyacinths, small species of *Tulips* and *Narcissus* and our own native *Calochorti* and *Erythroniums* planted beneath carpeting plants will increase in beauty for years, if left undisturbed. The ground cover makes a charming background for the bulb flowers and after the bulb foliage dies down, keeps the space attractive throughout the year.

Evergreen shrubs, such as Heather, shrubby Thymes, *Helianthemum*, *Santolina*, *Pentstemons*, *Ceanothus prostratus* and *Kalmia microphylla* are good for winter foliage effect. Many of the *Sedums*, encrusted and mossy *Saxifrages*, *Veronicas* and creeping Thymes are also evergreen in this country and make a fine winter display.

Dainty and slow growers should not be planted close to the rank growing types. Such plants as the dwarf Phlox, Iris, *Lewisias* and *Violas* are especially desirable for small pockets, while *Arabis alpine*, most *Aubretias*, *Cerastium tomentosum* and the vigorous *Campanulas* should be in large pockets and made to stay there.

Don't use Michaelmas daisies, German iris, *Delphiniums* or other tall and robust plants, however beautiful they may be, in a small rockery. They are out of proportion and, what is more to the point, will often kill out the more desirable plants of slower growth.

### Alpine Plants—What Are They?

Alpines are not a group apart but rather relatives of familiar lowland plants that have adapted themselves to the short growing season and rigorous climatic conditions on the mountain heights. Thus we have alpine lupines, asters, buttercups, cinquefoils, phlox and so on, all close relatives of tall growing lowlanders of the same groups. Alpine forms almost invariably sacrifice stem and leaf growth in favor of the flower. This results in dwarf growing, small leaved species with flowers as large as their lowland cousins. Frequently the intense light of the high mountains seems to intensify the colors of the flowers, giving them purer and more dazzling colors.

Such dwarf forms have been developed in all the mountain ranges of the world so that there is an almost endless variety from which to choose. The mountains of Europe and Asia have yielded up their alpine treasures to enthusiastic plant explorers until many of the finest are more widely known in American gardens than our own choice native plants. There is no area in North America that can produce a greater variety of choice alpines than the mountains of Oregon. The Cascades, the Siskiyou, the Blue Mountains and the desert ranges of the southeastern part of the state all have their alpine flowers and it is our hope to introduce many of them to the gardens of this country.

Perhaps the finest of American alpines are the dwarf phlox of which Oregon has a goodly array in white, lavender and pink. In addition to those are many *Pentstemons*, *Saxifragas*, *Erythroniums*, *Brodiaeas*, Lilies, *Eriogonums*, Asters, *Erigerons*, *Ranunculus*, *Potentillas*, Violets, *Lewesias* and many others that are yet entire strangers to our gardens. Some of them are listed in this catalogue for the first time. Of many others we have a limited stock from which we expect to grow enough plants to warrant putting them on our list. It will pay anyone interested in something new for their garden to get in touch with us as we can supply individual plants of many not listed as yet.

Some shrubbery is essential in a well-balanced rock garden and a shrubby background often adds greatly to its beauty. For small rockeries there are tiny shrubs and for larger ones some of the taller growers are available.

The following, which are described in the main body of this catalogue, are suitable for various uses in the rockery: *Arctostaphylos*, Azalea, *Berberis*, *Ceanothus*, *Cistus*, *Genista*, *Helianthemum*, *Kalmia*, *Phyllodoce*, *Rhododendron*, *Santolina*, *Shortia*, *Thymus citriodorus*, and the following *Pentstemons*: *barettae*, *cardwelli*, *fruticosa*, *menziesii*, and *rupicola*.

## Plants for the Rock Garden

		Price
<b>ACAENEA</b>		
50	<b>microphylla.</b> Mossy foliage, showy and singular rosy spines. Height 3 inches.....	\$ .25
<b>ACHILLEA</b>		
100	<b>argentea.</b> Dwarf silver leafed plant with heads of white flowers. Height 6 inches.....	.25
105	<b>tomentosa.</b> A neat dwarf plant with downy foliage and flat flower heads of bright yellow on 6 to 8 inch stems. June-July .....	.20
<b>AETHIONEMA</b>		
120	<b>grandiflorum.</b> Twelve-inch shrub, the largest of the family, with blue gray foliage and big pink flowers in loose heads	.35
126	<b>ovalifolium.</b> A neat gray-leaved shrub with bright pink flowers June-July. Height 6 to 10 inches.....	.25
128	<b>shistosum.</b> A dainty shrub, pink flowers. Height 6 to 8 inches .....	.25
130	<b>warleyensis.</b> A semi-prostrate little shrub of some 6 inches with stiff little blue green leaves, and bright pink flowers in May and June. The best of all these dainty little sun-loving plants .....	.75
<b>ALSINE</b>		
143	<b>bauhinorum.</b> Dainty mats of fine green leaves from which arise on wavy stems many pure white flowers. Good plant. Creeper .....	.30
<b>ALYSSUM</b>		
155	<b>amanum.</b> A creeping mat of silvery foliage covered in spring with heads of clear yellow flowers. Good and easy, should be a standard rock plant in every garden. Creeper.....	.25
160	<b>idaeum.</b> A fine new prostrate silvery leaved Alysum with heads of soft yellow flowers in May.....	.30
170	<b>saxatile compactum.</b> Gray foliage covered with masses of yellow flowers in early spring. Height 12 to 18 inches....	.20
<b>ANDROSACE</b>		
198	<b>lactea.</b> Little rosettes of shiny dark green linear leaves, above which, on 2-inch stems, are the dainty clear white flowers with a golden eye that has all the airy grace of the androsace.....	.35
199	<b>laggeri.</b> Tiny rosettes of prickly leaves above which, in May and June, appear fine umbels of soft pink. The finest and most compact Androsace yet introduced and one of the finest rock plants known. Strong field-grown plants .....	.75
200	<b>lanuginosa.</b> Silver foliage, pink flowers, long bloomer and a fine representative of this choice group of plants. Creeper	.35
203	<b>primuloides.</b> Similar to sarmentosa but with the leaves of the rosettes covered with long white hairs. Flowers flesh pink carried in heads on 4-inch stems.....	.25
210	<b>sarmentosa.</b> Spreading masses of silvery rosettes carrying goodly sprays of soft pink flowers. Height 4 inches.....	.25
211	<b>sempervivoides.</b> Neat rosettes of fleshy oval leaves fringed with hair on the edges. Rose pink flowers on 4-inch stems .....	.35
<b>ANEMONE</b>		
215	<b>blanda.</b> An early spring beauty. Soft blue flowers with a minute golden center. Height 3 inches.....	.35
220	<b>deltoides.</b> Native. A shade-loving anemone with lovely white flowers on foot stems.....	.25
224	<b>fulgens.</b> A beautiful European which blooms early with big blazing red flowers on 8 to 10-inch stems. An exceptional plant .....	.35

SEND FOR BULB LIST

## ANEMONE — Continued

		Price
230	<b>oregana.</b> Native dainty woodland anemone varying in color from white to clear blue. Height 8 to 10 inches.....	\$ .25
240	<b>pulsatilla.</b> Fine early bloomer, large violet to lavender half-open flowers on hairy stems. Height 8 to 12 inches.....	.25
242	<b>St. Brigid.</b> Early spring flowers in a variety of colors. Height 10 to 14 inches.....	.15
243	<b>sylvestris.</b> A fine white woodland Anemone for naturalizing. It quickly forms nice colonies and blooms in spring. 12 inches .....	.20
244	<b>vernalis.</b> Leave like those of a course Anemone pulsatilla and open opalescent cups, white within and violet without. Early spring .....	.50

## AQUILEGIA

250	<b>coerulea.</b> Long-spurred blue and white flowers. Colorado state flower. The best of all columbines.....	.25
260	<b>formosa.</b> Native. Red and yellow flowers. Very good. Height 18 to 24 inches.....	.25
265	<b>leptocera.</b> Soft white long-spurred columbine from Utah mountains often described as a form of coerulea. One of the most showy plants of our garden. 18 to 24 inches...	.35
274	<b>pyrenaica.</b> A beautiful dwarf columbine with dainty foliage and flowers of deep violet. One of the most choice for the rock garden. Height 12 to 14 inches.....	.35

## ARABIS

280	<b>alpina.</b> Low compact domes of evergreen rosettes, covered in spring with white flowers. Desirable for edgings, walls or large pockets. Height 6 to 10 inches.....	.15

288	<b>koelheri.</b> Native. A gray leaved woody evergreen Arabis with dark red flowers in slender sprays. A rare plant and real novelty. Height 8 inches. April to June.....	.50
290	<b>purpurascens.</b> Native. Compact rosettes of heavy green leaves, bright red to purple flowers. Needs poor soil. Rare. Height 8 to 10 inches.....	.30

CAMPANULA ROTUNDIFOLIA

LEWISIA HOWELLI

**ARCTOSTAPHYLOS**

Price

- 310 *uva-ursi*. Native. A prostrate shrub with shiny evergreen leaves and bright red berries.....\$ .35

**ARENARIA—Sandwort**

- 315 *balerica*. Dainty creeping mat of bright green leaves with tiny white flowers in late summer..... .25
- 325 *montana*. Neat growing evergreen; clear white flowers in spring; dainty appearance. Height 6 to 8 inches..... .25

**ARMERIA—Sea Thrift**

- 330 *maritima*. Compact clumps of grassy foliage and heads of pink flowers. Height 6 to 8 inches..... .25

**ASARUM—Wild Ginger**

- 340 *hartwegi*. Native. Variegated leaves, each leaf is soft green with silvery area along the midrib. A fine shade ground cover. Creeper..... .30

**ASTER**

- 350 *alpina*. Alpine Aster. Large lavender flowers with yellow centers. Forms low mat of leaves. Long bloomer. Height 10 to 12 inches..... .25
- 353 *Beauty of Ronsdorf*. A fine 15-inch aster with delicate violet flowers, each having a golden center. Fine for rock garden or cutting..... .25
- 360 *subcoerulus*. A magnificent aster *alpina* of some 15 inches and a June bloomer..... .25
- 365 *yunnanensis*. A 12 to 18-inch Aster with large brilliant blue flowers. Very vigorous and floriferous..... .35

**ASTILBE**

- 370 *davidi*. Herbaceous spirea with good foliage and plumes of soft pink. Good for shade. Height 24 to 36 inches..... .50

**AUBRIETIA**

- 400 *hendersoni*. Beautiful compact evergreen. Covered at intervals with violet flowers. One of the best. Should be in every rock garden. Height 6 to 10 inches..... .25
- 405 *fire king*. Red flowering form of the above choice rock plant .25

**BELLIUM**

- 415 *coerulescens*. A dwarf aster-like plant with flat rosettes of bright green leaves and pink or white flowers. A real dwarf that flowers all season..... .20

**BERBERIS**

- 423 *gracilis*. A compact growing holly-leaved barberry for shrubbery plantings and large rock gardens. Grows about 2½ feet high. Small plants 50c; large field grown.. .75
- 428 *verruculosa*. Dwarf evergreen barberry with arching branches and dark green foliage. One of the best of all barberries. Height 2 to 3 feet. Small plants only.... .50

**CALAMINTHA**

- 435 *alpina*. A fine dwarf evergreen shrub which is covered in mid-summer with violet and white mint-like flowers. Height 6 to 8 inches..... .20

**CALCEOLARIA**

- 440 *polyrrhiza*. A spreading mat of dull green leaves from which arise 4-inch stems carrying odd yellow flowers spotted with brown. Something good. 4 to 6 inches.... .25

**CALTHA—Marsh Marigold**

- 450 *biflora*. Native. Big round shiny leaves, white buttercup flowers. Height 10 to 14 inches..... 25
- 453 *palustris*. The Cowslip of the mid-western states. Shining green leaves and clusters of butter yellow flowers. Good for a wet place. Height 10 to 12 inches..... .25

PELLAEA

1390 densa. A tiny rock fern. Hardy and fine for rockery. Height 4 inches..... .30

PENSTEMON—An American genus of an unusual variety of beauty. You can, from this list, secure a penstemon for nearly every purpose. P. menziesii and P. rupicola are dwarf woody creepers, rock hugging forms of the highest value. P. barretae, cardwelli, deustus, oreganus and fruticosa are evergreen woody shrubs of less than a foot. The others are herbaceous although many are more or less evergreen through the winter. Amid the almost universal confusion of names in this family it is difficult indeed to be sure of names. Our plants insofar as possible have been identified by comparison with herbarium specimens named by National Museum Botanists or by direct identification by them of specimens.

1417 acuminatum. Native. A fine penstemon with blue-gray leaves and dense racemes of clear blue flowers. One of the best and most easily grown of this type of penstemon. Height 6 to 12 inches. June..... .35

1403 azureus. Native glaucous leaves and loose spikes of clear blue flowers make this one of the very best rock garden pentstemons. Height 12 to 16 inches..... .35

1405 barretae. Native. Choice evergreen with somewhat silvered leaves and short spikes of lilac purple flowers. Height 10 to 12 inches..... .35
